Native Mobile Apps

Native Mobile Apps

In a **future** release, Bitwarden Password Manager mobile apps downloaded via the Apple App Store and Google Play Store will be upgraded to native mobile applications for iOS and Android:

- Users who **install** Bitwarden after this release will always receive the new native application.

- Users who **already have Bitwarden installed** on their devices will have the new native application rolled out to them in phases.

> ⚠ **Warning**
>
> Native mobile applications have stricter operating system requirements than Xamarin applications:
>
> - Android users must be on Version 10 or higher. Learn how to check your Android version.
>
> - iOS users must be in iOS 15.0 or higher. Learn how to check your iOS version.
>
> If your device does not meet these version requirements, your Bitwarden mobile app will remain at the latest version available before this change.
