D bit warden

Bitwarden Authenticator

Bitwarden Authenticator is a mobile authentication app (available on iOS and Android) you can use to verify your identity for websites and apps that use two-factor authentication (2FA). Bitwarden Authenticator generates 5–10 digit time-based one-time passwords (TOTPs), by default using SHA-1 and rotating them every 30 seconds.

Bitwarden iOS Authenticator app

Add codes

In the website or app you're trying to setup 2FA for, navigate to their 2FA screen and either Scan a QR code or Add a code manually:

⇒Scan a QR code

- 1. Tap the + icon.
- 2. Point your camera at the QR code. Scanning will happen automatically.

D bit warden

⇒Add a code manually

- 1. Tap the + icon.
- 2. Tap Enter key manually at the bottom of the screen.
- 3. Enter the name of the website or app in the Name field.
- 4. Enter the Authenticator key offered by the website or app. Some services refer to this as a "secret key" or "TOTP seed".

🖓 Tip

When you get a new mobile device, you can export data from Bitwarden Authenticator and import that data on your new device. Learn how.

Edit an item

Long-press an entry on the Verification codes screen to make changes to it. Aside from changing the name and secret you've already added, you can:

- Designate an item as a Favorite, which will move it to the top of the Verification codes screen for easy access.
- Add a **Username** to the item. Use this field when you have multiple accounts for the same website and require a separate verification code per account.
- Change the Algorithm used to generate the code. By default, Bitwarden Authenticator uses SHA-1.
- Change the Refresh period for the code. By default, Bitwarden Authenticator uses 30 seconds.
- Change the Number of digits for the code. By default, Bitwarden Authenticator uses 6 digits.

🖓 Tip

Algorithm, Refresh period, and Number of digits are determined by the site you're using the verification code with. Do not change these settings for an item unless that website requires it or allows you to customize verification code behavior.

Use codes

To use a verification code once the secret for that account is stored in Bitwarden Authenticator, open Bitwarden Authenticator and tap the entry to copy its verification code to your clipboard. Then, paste the verification code in the input for the website or app you're logging in to.
