Browser extension shortcuts

Some browsers, including Microsoft Edge and Safari may use the below key combinations for other default shortcuts. In these cases, you will need to configure your browsers shortcuts:

- For Chromium-based browsers (Chrome, Edge, Vivaldi, Brave, and more) this can be done from `chrome://extensions/shortcuts`, `edge://extensions/shortcuts`, and so on.

  > ⓘ **Note**
  >
  > Autofill for Microsoft Edge requires the latest Chromium-based version.

- For Safari, you may need to re-assign the Show/Hide Sidebar shortcut in order to free up CMD + Shift + L for autofill by Bitwarden. Learn how.

- For Firefox, refer to these instructions.

The following are the default shortcuts for Bitwarden browser extensions:

- Ctrl/CMD + Shift + Y → Activate extension

- Ctrl/CMD + Shift + L → Autofill, press again to cycle through matching logins

- Ctrl/CMD + Shift + 9 → Generate a password and copy it to the clipboard

- Ctrl/CMD + Shift + N → Lock extension

- Manual assignment → Autofill the last used card for the current website. Learn how here.

- Manual assignment → Autofill the last used identity for the current website. Learn how here.

> 💡 **Tip**
>
> If a login uses the Bitwarden authenticator for TOTPs, using the `Cmd/Ctrl + Shift + L` will automatically copy your TOTP to your clipboard after auto-filling. All you have to do is `Cmd/Ctrl + V` to paste!

Desktop application shortcuts
