Your Master Password

Your Master Password

Your master password is the primary method for accessing Bitwarden. It's important that your master password is:

- **Memorable:** Bitwarden employees and systems have **no** knowledge of, way to retrieve, or way to reset your master password. **Do not forget your master password!**
- **Strong:** A longer, more complex, and less common password is the best way to protect your account. Bitwarden provides a free [password strength testing tool](#) to test the strength of some memorable passwords you are considering.

Master passwords made after the [2023.3.0 release](#) must be at least 12 characters.

Tip

Ben je bang dat je je hoofdwachtwoord vergeet? Dit is wat je moet doen:

- **Stel een hint in.** Als je een herinnering nodig hebt, kun je op het inlogscherf een e-mail met een hoofdwachtwoordhint aanvragen. Zorg ervoor dat je een hint gebruikt die alleen jij begrijpt.
- **Wijs een vertrouwde contactpersoon voor noodgevallen.** Gebruikers met premium toegang kunnen in geval van nood een vriend of familielid toegang geven tot hun account.

Change master password

If you know your current master password, you can change it from the web vault:

Note

If you do not know your current master password, [learn what to do](#).

1. In the web app, select the **Settings** → **Security** from the navigation:
2. Select the **Master password** tab:

The screenshot shows the Bitwarden web interface. On the left is a dark blue sidebar with navigation options: Password Manager, Vaults, Send, Tools, Reports, Settings, My account, Security (highlighted), Preferences, Domain rules, Emergency access, and Free Bitwarden Famili... At the top right of the main content area, there is a 'Security' header and a user profile icon labeled 'BW'. Below the header are three tabs: 'Master password' (selected), 'Two-step login', and 'Keys'. The main heading is 'Change master password'. A yellow warning box states: 'Warning: Proceeding will log you out of your current session, requiring you to log back in. Active sessions on other devices may continue to remain active for up to one hour.' Below this are three input fields: 'Current master password', 'New master password', and 'Confirm new master password'. A note below the 'New master password' field says: 'Important: Your master password cannot be recovered if you forget it! 12 character minimum'. There are two checkboxes: 'Check known data breaches for this password' (checked) and 'Also rotate my account's encryption key' (unchecked). Below these is a 'New master password hint (optional)' input field. A blue 'Change master password' button is at the bottom of the form. At the very bottom of the page, there is a 'Log in with passkey' option with 'Off' and 'Beta' buttons, and a link to 'Instellingen hoofdwachtwoord'.

3. Enter your **Current master password**.

4. Enter and confirm your **New master password**.

5. If you want to check your master password through HIBP before submitting it, check the **Check known data breaches for the password** ([learn more](#)) box. To run this report, a hash of your master password is sent to HIBP and compared to stored exposed hashes. Your master password itself is never exposed by Bitwarden.

Warning

Don't check the **rotate account's encryption key** box unless you fully understand the ramifications and required follow-up actions. [Learn more](#).

6. Select the **Change master password** button.

Changing your master password will automatically log you out of the web vault session. Other logged-in apps may remain active for up to an hour, but will eventually also require you to log back in with your new master password.

I forgot my master password

Additional login options

Your master password is a requirement for setting up your Bitwarden account. Depending on how you or your organization interact with Bitwarden, additional options are available for accessing your Bitwarden account.

Method	Description
Log in with device	Login with device is an option to utilize a trusted secondary device that can send authentication requests to Bitwarden. Learn more about login with device here .
Log in with SSO	Bitwarden users who are part of an organization that utilizes login with single sign-on(SSO) can login leveraging an existing identity provider, that will authenticate the user. Learn more about login with SSO here .
Log in with passkeys (beta)	Passkeys can be used to log in to Bitwarden as an alternative to using your master password and email, and some passkeys can be used for vault encryption and decryption. Learn more here .
Unlock with biometrics and unlock with PIN	Using unlock with biometrics or PIN is not an alternative login method, however, this feature can allow you to access a locked account with system biometrics or a PIN instead of a master password. Learn more about unlock with biometrics and unlock with PIN .

Next steps

Now that you have created a **memorable** and **strong** master password, we recommend:

- [Further securing your account with two-step login](#)
- [Enabling emergency access](#) (requires premium)
