Experience the power of secure password management

By starting a Bitwarden Enterprise trial, your business is taking the first step towards powerful, secure collaboration. With a library of help documentation, 24/7 customer support, and live training, Bitwarden is here to support you along the way.

Ready to start your Enterprise trial?

[Create an account >](#)

Once you create your Enterprise Organization, get started in four easy steps.

1. Save Your Master Password

Your **master password** is the primary method for accessing your personal and organization vault. Be sure to use a strong and unique [master password](#) and store it in a safe place outside of your Bitwarden vault.

2. Invite Key Users

Invite key users such as system administrators and product owners to join your Bitwarden organization. Easily send [user invites](#) from within the management tab of your enterprise's vault.

3. Organize with Collections

Collections let you organize **vault items** and share them securely with individual users or **groups**. [Create a](#) from within the organization management tab.

4. Create and Import Vault Items

Import or create new **vault items** and organize them by **collection**. Items can include logins, credit cards, identity information, or secure notes. You can [import items](#) for a fast and easy migration from another password management solution. Feel free to use this [example import file](#) for testing.

Pre-onboarding tips

Set a secure foundation for your team

1. Create User Groups

Simplify access management with [user groups](#). Groups empower you to easily share **collections** with sets of specific users, like a team, managers, and admins. Visit the management section of your organization to get started.

2. Set Enterprise Policies

Scale security standards across your enterprise by setting custom vault parameters for end-users with [enterprise policies](#). Require two-step login, restrict users to a single organization, set password strength requirements, and more.

3. Customize User Roles

When adding new users, set customized permissions by designating their **user type** and **access control**. Manually invite users from the management tab or automatically provision accounts through [SCIM](#) or the [Bitwarden Directory Connector](#).

Top features and benefits

Put these top business features to the test

Vault Health Reports

Gain insight into exposed, weak, and reused passwords, unsecured websites, data breaches, and more.

Secure Sharing with Anyone

Use Bitwarden Send to securely share encrypted information directly with anyone.

Enterprise Policies

Add custom **enterprise policies** to enforce security requirements and best practices for all end-users.

SCIM

Utilize the System of Cross-Identity Management (**SCIM**) to provision accounts automatically.

Single Sign-On

Integrate your existing identity provider and simplify the Bitwarden authentication process for employees.

Event & Audit Logs

Get an overview of user activity with exportable and timestamped event logs of your organization Vault.

Directory Sync

Provision and de-provision user accounts easily by connecting your existing directory service to your Bitwarden organization.

Training & Priority Support

Access training for owners, admins, and end-users, and get 24/7 priority support whenever you need it.

Explore the full list of Bitwarden Enterprise features [here](#).

Training and Deployment

Set the stage for a successful deployment

1. Join a live training or watch on-demand

Our weekly [live demos](#) and [on-demand training](#) options are a great place for you and your employees to build expertise.

2. Educate users and set clear expectations

Educate end-users about the importance of adopting secure password practices (both at home and in the workplace) and communicate the steps in the deployment process so they can better prepare for change.

3. Take advantage of the Help Center

The [Help Center](#) is your go-to destination for answers to your Bitwarden questions, and join the Bitwarden Community [forums](#) to share knowledge and tips with other security-minded users.
