Okta OIDC Implementation

This article contains **Okta-specific** help for configuring login with SSO via OpenID Connect (OIDC). For help configuring login with SSO for another OIDC IdP, or for configuring Okta via SAML 2.0, see [OIDC Configuration](#) or [Okta SAML Implementation](#).

Configuration involves working simultaneously within the Bitwarden web app and the Okta Admin Portal. As you proceed, we recommend having both readily available and completing steps in the order they are documented.

Open SSO in the web vault

Log in to the Bitwarden [web app](#) and open the Admin Console using the product switcher:

The screenshot shows the Bitwarden web app interface. On the left is a dark blue sidebar with a 'Password Manager' header and a list of navigation items: 'Vaults', 'Send', 'Tools', 'Reports', 'Settings', 'Password Manager', 'Secrets Manager', 'Admin Console', and 'Toggle Width'. A red box highlights the 'Password Manager', 'Secrets Manager', and 'Admin Console' items. A red arrow points from the 'Admin Console' item to the 'Product switcher' button in the top right corner of the main area. The main area is titled 'All vaults' and features a 'New' button and a 'BW' profile icon. Below the title is a table of vaults with columns for 'Name' and 'Owner'. The table lists four vaults: 'Company Credit Card' (owned by 'My Organiz...'), 'Personal Login' (owned by 'Me'), 'Secure Note' (owned by 'Me'), and 'Shared Login' (owned by 'My Organiz...').

Product switcher

Select **Settings** → **Single sign-on** from the navigation:

If you haven't already, create a unique **SSO identifier** for your organization. Otherwise, you don't need to edit anything on this screen yet, but keep it open for easy reference.

There are alternative **Member decryption options**. Learn how to get started using [SSO with trusted devices](#) or [Key Connector](#).

In the Okta Admin Portal, select **Applications** → **Applications** from the navigation. On the Applications screen, select the **Create App Integration** button. For Sign-on method, select **OIDC – OpenID Connect**. For Application type, select **Web Application**:

Create a new app integration

Sign-on method

[Learn More](#) 

- ☒ **OIDC - OpenID Connect**
Token-based OAuth 2.0 authentication for Single Sign-On (SSO) through API endpoints. Recommended if you intend to build a custom app integration with the Okta Sign-In Widget.
- ☐ **SAML 2.0**
XML-based open standard for SSO. Use if the Identity Provider for your application only supports SAML.
- ☐ **SWA - Secure Web Authentication**
Okta-specific SSO method. Use if your application doesn't support OIDC or SAML.
- ☐ **API Services**
Interact with Okta APIs using the scoped OAuth 2.0 access tokens for machine-to-machine authentication.

Application type

What kind of application are you trying to integrate with Okta?

Specifying an application type customizes your experience and provides the best configuration, SDK, and sample recommendations.

- ☒ **Web Application**
Server-side applications where authentication and tokens are handled on the server (for example, Go, Java, ASP.Net, Node.js, PHP)
- ☐ **Single-Page Application**
Single-page web applications that run in the browser where the client receives tokens (for example, Javascript, Angular, React, Vue)
- ☐ **Native Application**
Desktop or mobile applications that run natively on a device and redirect users to a non-HTTP callback (for example, iOS, Android, React Native)

Create App Integration

On the **New Web App Integration** screen, configure the following fields:

Field	Description
App integration name	Give the app a Bitwarden-specific name.
Grant type	Enable the following grant types: - Client acting on behalf of itself → Client Credentials - Client acting on behalf of a user → Authorization Code
Sign-in redirect URIs	Set this field to your Callback Path, which can be retrieved from the Bitwarden SSO Configuration screen. For cloud-hosted customers, this is https://sso.bitwarden.com/oidc-signin or https://sso.bitwarden.eu/oidc-signin. For self-hosted instances, this is determined by your configured server URL, for example https://your.domain.com/sso/oidc-signin.
Sign-out redirect URIs	Set this field to your Signed Out Callback Path , which can be retrieved from the Bitwarden SSO Configuration screen.
Assignments	Use this field to designate whether all or only select groups will be able to use Bitwarden Login with SSO.

Once configured, select the **Next** button.

Get client credentials

On the Application screen, copy the **Client ID** and **Client secret** for the newly created Okta app:

Bitwarden Login with SSO

Active ▾

View Logs

General Sign On Assignments Okta API Scopes

Client Credentials

[Edit](#)

Client ID

Public identifier for the client that is required for all OAuth flows.

Client secret

Secret used by the client to exchange an authorization code for a token. This must be kept confidential! Do not include it in apps which cannot keep it secret, such as those running on a client.

Ready to code

You can download a preconfigured sample app.

[Download sample app](#)

To get started using your custom app integration, see the "Sign Users In" section in the Okta [Developer's guide](#)

App Client Credentials

You will need to use both values [during a later step](#).

Get authorization server information

Select **Security** → **API** from the navigation. From the **Authorization Servers** list, select the server you would like to use for this implementation. On the **Settings** tab for the server, copy the **Issuer** and **Metadata URI** values:

[← Back to Authorization Servers](#)

default

[Help](#)

Active ▾

- Settings
- Scopes
- Claims
- Access Policies
- Token Preview

Settings

Edit

Name	default	
Audience	api://default	
Description	Default Authorization Server for your Applications	
Issuer	https:// it	.okta.com/oauth2/default
Metadata URI	https:// it/well-known/oauth-authorization-server	.okta.com/oauth2/default

Authorization Servers

An authorization server defines your security boundary, and is used to mint access and identity tokens for use with OIDC clients and OAuth 2.0 service accounts when accessing your resources via API. Within each authorization server you can define your own OAuth scopes, claims, and access policies. Read more at [help page](#)

Okta Authorization Server Settings

You will need to use both values [during the next step](#).

Back to the web app

At this point, you have configured everything you need within the context of the Okta Admin Portal. Return to the Bitwarden web app to configure the following fields:

Field	Description
Authority	Enter the retrieved Issuer URI for your Authorization Server.

Field	Description
Client ID	Enter the retrieved Client ID for your Okta app.
Client Secret	Enter the retrieved Client secret for your Okta app.
Metadata Address	Enter the retrieved Metadata URI for your Authorization Server.
OIDC Redirect Behavior	Select Redirect GET . Okta currently does not support Form POST.
Get Claims From User Info Endpoint	Enable this option if you receive URL too long errors (HTTP 414), truncated URLs, and/or failures during SSO.
Additional/Custom Scopes	Define custom scopes to be added to the request (comma-delimited).
Additional/Custom User ID Claim Types	Define custom claim type keys for user identification (comma-delimited). When defined, custom claim types are searched for before falling back on standard types.
Additional/Custom Email Claim Types	Define custom claim type keys for users' email addresses (comma-delimited). When defined, custom claim types are searched for before falling back on standard types.
Additional/Custom Name Claim Types	Define custom claim type keys for users' full names or display names (comma-delimited). When defined, custom claim types are searched for before falling back on standard types.
Requested Authentication Context Class Reference values	Define Authentication Context Class Reference identifiers (acr_values) (space-delimited). List acr_values in preference-order.
Expected "acr" Claim Value in Response	Define the acr Claim Value for Bitwarden to expect and validate in the response.

When you are done configuring these fields, **Save** your work.

**Tip**

You can require users to log in with SSO by activating the single sign-on authentication policy. Please note, this will require activating the single organization policy as well. [Learn more](#).

Test the configuration

Once your configuration is complete, test it by navigating to <https://vault.bitwarden.com>, entering your email address and selecting the **Use single sign-on** button:

Log in to Bitwarden

Email address (required)

☒ Remember email

Continue

or

Log in with passkey

Use single sign-on

New to Bitwarden? [Create account](#)

Log in options screen

Enter the [configured organization identifier](#) and select **Log In**. If your implementation is successfully configured, you'll be redirected to the Okta login screen:

The image shows a screenshot of an Okta Sign In page. At the top is the Okta logo. Below it is a circular placeholder for a user profile picture. The text "Sign In" is centered. There are two input fields: "Username" and "Password". Below the password field is a checkbox labeled "Remember me". A blue "Sign In" button is at the bottom of the form. Below the button is a link that says "Need help signing in?".

Log in with Okta

After you authenticate with your Okta credentials, enter your Bitwarden master password to decrypt your vault!

Note

Bitwarden does not support unsolicited responses, so initiating login from your IdP will result in an error. The SSO login flow must be initiated from Bitwarden. Okta administrators can create an [Okta Bookmark App](#) that will link directly to the Bitwarden web vault login page.

1. As an admin, navigate to the **Applications** drop down located on the main navigation bar and select **Applications**.
2. Click **Browse App Catalog**.
3. Search for **Bookmark App** and click **Add Integration**.
4. Add the following settings to the application:
 1. Give the application a name such as **Bitwarden Login**.
 2. In the **URL** field, provide the URL to your Bitwarden client such as <https://vault.bitwarden.com/#/login> or [your-self-hostedURL.com](#).
5. Select **Done** and return to the applications dashboard and edit the newly created app.
6. Assign people and groups to the application. You may also assign a logo to the application for end user recognition. The Bitwarden logo can be obtained [here](#).

Once this process has been completed, assigned people and groups will have a Bitwarden bookmark application on their Okta dashboard that will link them directly to the Bitwarden web vault login page.
