What will you learn in the 2024 Cybersecurity Pulse Survey?

Bitwarden partnered with Researchscape International to survey over 1,100 IT and cybersecurity leaders across various industries, revealing the latest cybersecurity trends and threats. This year's findings underscore rising concerns about generative AI risks, third-party supply chain vulnerabilities, and sophisticated social engineering tactics.

Despite increasingly advanced threats, consensus remains clear: mastering cybersecurity fundamentals, starting with strong password habits, is the best defense. IT decision makers agree that password managers remain a critical part of their security strategy, both at work and at home.

Password managers play a critical role in security

- An overwhelming majority (92%) of respondents moderately or strongly agree that password managers are essential to their organization's cybersecurity strategy.
- 63% of respondents agree that, without a password manager, their IT teams would struggle to teach and enforce best practices across their organizations.
- 79% of respondents have recommended using a password manager to family members, underscoring the universal benefits of this tool.

Passwordless authentication is also popular in the workplace – just 3% of respondents reported using no form of passwordless authentication at their company.

92% agree password managers are the lynchpin to protecting business

Are password managers essential to your organization's cybersecurity strategy?
